Business Model

Increased complexity
by further integration
into subsystems

Efficient software is more **economical** and more **sustainable**.

This applies
to embedded...

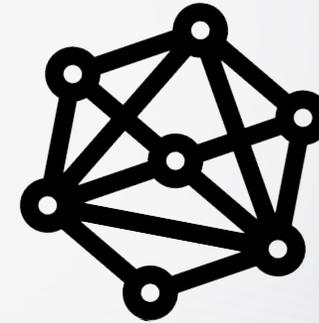

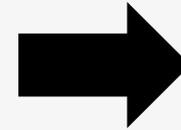

...as well as for the cloud.

Maintaining efficiency becomes harder with many components involved.

New Architecture

The increasing **modularization** and dissolution of the classic automation pyramid leads to increased **reusability** of software and systems.

Common Data Models

Modulare Architecture

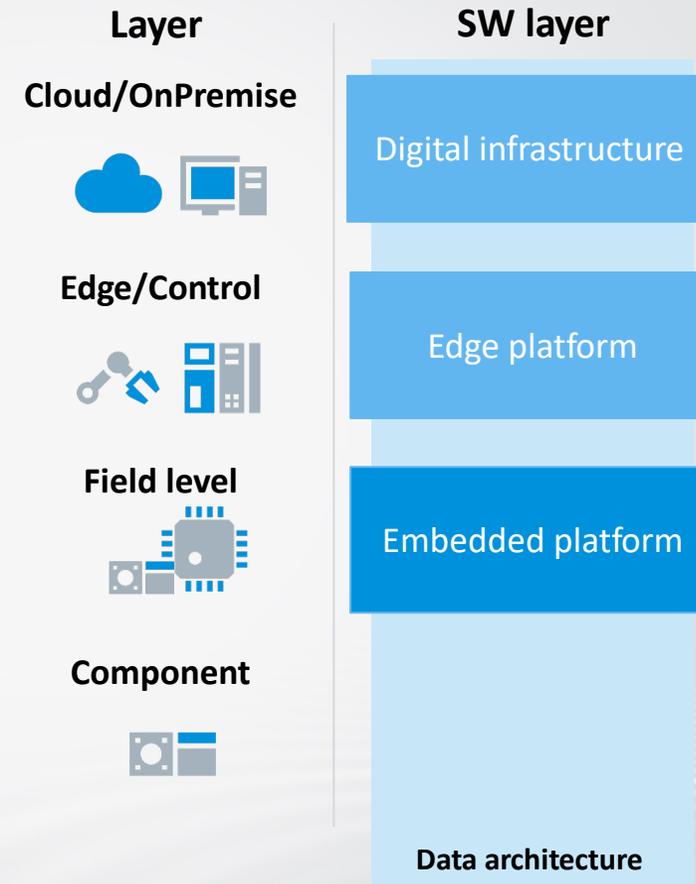

Open Interfaces

Standardized Protocols

New Architecture

This new architecture brings in a **sophisticated software stack** to manage and new methods to apply.

A **challenge** for a company innovating mechanics.

Festo is developing a modular system for building **intelligent, efficient** and **sustainable software** on a large scale.

Electric Automation

Digital Business

Handling complexitiy and unifying architectures across a very diverse portfolio!

Mastering technology does not solve it alone - a **change in culture and leadership** is needed for innovating with software.
